

Logistics Software Corp. & Global Trade Resources Inc. Merge

Logistics Software Corp. and Global Trade Resources Inc.(GTRI) are pleased to announce the completion of their merger. Combined business operations will commence April 19, 2004. Logistics Software Corp. and GTRI, having many synergies, are now unifying the organizations to become the premier provider of software and data transmission solutions for the international trade needs of customs brokers, carriers, freight forwarders, importers, exporters and warehouse/distribution operations. GTRI's comprehensive 20 years of experience in the international trade marketplace, under the leadership of Thomas Lauriault, President & CEO and former Executive Vice President of Russell A. Farrow Ltd., will bring a new level of credibility and market exposure to Logistics Software Corp. Mr. Lauriault, having received professional status as a licensed customs broker in 1985, will be President & Secretary of the new Logistics Software Corp. Mr. Lauriault states, "the newly formed management and development team will be offering a combination of robust and technologically advanced software solutions to a market place that has been relying on outdated technology for far too long". Michael Muir, who retains the role of CEO & Treasurer, adds "there has been limited availability of higher-end solutions that are able to take advantage of today's technological trends and respond to the constant changes in Customs systems, processes and regulations. The new Logistics Software Corp. will move rapidly to fill this void".

The business operations of the new "Logistics Software Corp." will continue from their centrally located head office in Toronto, Ontario. The new branch office in Windsor, Ontario immediately expands services to the busiest commercial international border crossing between Canada and the United States. Logistics Software Corp. currently supports clients across Canada and is now able to provide dedicated and tailored services to those companies and carriers closest to this heavily traveled commercial hub.

Logistics Software Corp's immediate initiative is to provide their robust software, which includes a diverse range of client and compliance capabilities for new and upcoming CBSA customs requirements, to the Customs Brokerage industry. Logistics Software Corp's product suite consists of Custom Brokerage clearance, RNS message management, direct connectivity software for secure exchange of EDI data with CBSA and DFAIT, wireless Warehouse Management tracking software solutions, and service provider for CADEX, ACROSS, RNS and ACI data.

Tony Le Piane - VP Business Development, Alex Tronin - VP Technology, and Cassandra Cassar - VP Client Services, complete the new executive management team, providing the company and its client base with a broad and comprehensive offering of experience, knowledge, skills and talent.
